About Me

A data science and machine learning enthusiast with hands-on experience in real-world analytics, dashboarding, and predictive modeling. I aim to solve impactful business problems using statistical methods, machine learning algorithms, and storytelling with data to drive smarter decisions.

Technical Skills

- Python, Scikit-learn, Streamlit, TensorFlow (basic), XGBoost
- Regular Expression, Data Wrangling
- Data Visualization (Matplotlib, Seaborn, Power BI)
- SQL (SQLite, MySQL, PostgreSQL, SQL Server)
- HTML, CSS, JAVAScript
- Data Cleaning (Pandas, NumPy, SQL)

Professional Experience

Data Analyst - Premier Tubular Inspection Services (PTIS) 03/2025 – present | Karachi, Pakistan

- Perform **end-to-end data cleaning and preprocessing**, ensuring accuracy, consistency, and reliability of datasets.
- Develop **interactive Power BI dashboards** to analyze trends and deliver actionable business insights.
- Apply **Regular Expressions (Regex)** for efficient data extraction, validation, and transformation.
- Contribute to **data-driven web development** using **React.js, Node.js, and MySQL**, integrating analytics with scalable applications.

Wordpress Developer Internship - Getgeeko 01/2025 – 02/2025 | Karachi, Pakistan

- Designed responsive web pages and customized UI components in WordPress.
- Improved site layout and mobile UX for higher engagement.

Data Scientist Trainee - TECHMA ZONE 11/2023 – 08/2024 | Karachi, Pakistan

- Cleaned and transformed data using Pandas, NumPy, and SQL.
- Built interactive Power BI dashboards to visualize trends and business KPIs.
- Trained ML models and deployed predictive systems.

Data Analyst Internship - RAD 02/2024 – 04/2024 | Karachi, Pakistan

- Analyzed real-world datasets using SQL & Power BI to generate insights for internal teams.
- Created dashboards to support business decisions.

Projects

Talent Scan - Recruitment System With LLM

- Developed an automated recruitment tool to parse resumes, extract key details, and rank candidates.
- Integrated an LLM API to generate insights and streamline candidate shortlisting.

T20 Score Predictor

- Developed an XGBoost-based match score predictor with 85% accuracy.
- Performed extensive data cleaning, feature engineering, and built visualizations for trend analysis.

LMS Automation - Quiz System

- Built an **automated employee testing system** with login, negative marking, and live result tracking connected to Google Sheets API.

- Developed an **admin dashboard** to view results, download reports, and auto-generate certificates for candidates who passed 4 standards.

Movie Recommendation System

- Implemented a **film recommendation system** utilizing techniques like Stemming, Bag of Words, Stop Words removal, and Cosine Similarity for accurate recommendations based on film features.
- Enhanced the user experience with **TMDB API** integration for fetching movie posters and deployed a **Streamlit-based UI**, offering a visually appealing and user-friendly platform for movie discovery.

Balance Fall Assessment Without Pose Using VideoMAE

- Implemented a **VideoMAE-based deep learning model** to detect human falls from multi-camera video data **without relying on pose estimation**.
- Preprocessed video sequences, fine-tuned a transformer model on the *Multiple Cameras Fall Dataset*, and achieved high accuracy in binary fall classification.

Advanced 2D Human Pose Estimation

- **Implemented a 2D human pose estimation system** using **YOLOv8-Pose** to accurately detect and visualize key body landmarks and skeletal structures for multiple subjects.
- **Enhanced model performance and efficiency** through data preprocessing, optimized training, and visualization of keypoint predictions on diverse image datasets.

Gait Classification Using VideoMAE

- Developed a **gait recognition model** using **VideoMAE** and multi-dataset integration (CASIA-B, UFC Crime) to classify walking patterns **without keypoint-based pose extraction**.
- Conducted model fine-tuning, data harmonization, and performance evaluation using PyTorch and Hugging Face Transformers.

UCF Crime Video Classification Using VideoMAE

- Built a **multi-class video classification system** on the *UCF Crime dataset* leveraging **VideoMAE transformers** for temporal-spatial feature learning from raw CCTV footage.
- Automated feature extraction and classification across **14 crime categories**, improving real-time anomaly detection accuracy.

Analyzing Popular App Categories on Google Play

- Analyzed app categories and trends using Pandas and Matplotlib.
- Visualized ratings, reviews, and installs to identify market patterns.

Chinook Music Store Dataset Analysis

- Extracted insights on sales trends, customer behavior, and popular genres.
- Wrote complex SQL joins and aggregations for reporting.

 Education

BS in Computer Science , <i>University Of Karachi(UBIT Department)</i>	02/2021 – 01/2025 Karachi, Pakistan
Intermediate , <i>Government Dehli College</i>	2018 – 2020 Karachi, Pakistan
Matriculation , <i>Metropolis Academy</i>	2016 – 2018 Karachi, Pakistan

 Certificates

Data Science: From TechmaZone | **Data Analyst:** From TechmaZone | **Power BI:** From TechmaZone
